

Five Styles of Replacement Blades for Wheeler Pruning Saw

(all prices include shipping)

---pins 16" apart---

- #1) "Rambo", 8 teeth per inch, very aggressive and long-lasting. Action is rather grabby because of large teeth. It requires an abundance of arm muscle, and is our fastest blade for large cuts. Average length of service: 120 full-size trees. \$2.50 each
- #2) 10 teeth per inch, extra thin. Less grabby than #1, and makes cleaner cuts. Average length of service: about 80 trees \$2.50 each
- #3) "Smoothie", 10 teeth per inch, extra narrow. A little slower cutting action but, requires much less effort. Less ragged cuts. Average length of service: 60 trees \$2.50 each
- #4) 14 teeth per inch, extra narrow. Slowest, smoothest cleanest cutting with very little force. About 40 trees \$2.50 each
- #5) Standard blade, 9 teeth per inch, supplied by manufacturer of Wheeler saw. Fairly smooth. Length of service: 15 trees \$1.50 each

Introductory offers

A. One blade of your choice sent free

OR

B. One each of all five blades above, plus one extra heavy brush blade, all for \$10.

(Historical note. These blades have been developed over the years by the Greenleaf pruning crew. We experiment from time to time with different blade stocks. I will keep customers informed of the best we come up with.)
