

Hello.

I am a member of a group of fruit enthusiasts who are passionate about discovering old and new varieties of apples, pears, plums, peaches and other edible species of plants that live tended or wild in Maine. Our goal is to share these findings with others as a commitment to seeing more fruit bearing plants become an established part of our landscape.

We host an annual Seed Swap and Scion Exchange at the MOFGA fairgrounds on the last Saturday in March. Its purpose is to give propagation wood out to the public. We are connected via the website and Facebook pages of the **Maine Tree Crop Alliance**. We would appreciate your help in locating heirloom varieties or wildlife planted seedlings that show attributes of outstanding fruit quality.

My contact info is:
